DIPLOMA IN CHILD HEALTH

DCH

COURSE SUPERVISOR – Chairperson of Child Health Discipline

CANDIDATES SUPERVISORS – Fully registered Paediatricians at an approval hospital.

INTRODUCTION:

The Diploma in Child Health Course is offered to Medical Postgraduates who wish to undertake further studies in Child Health. The Diploma in Child Health is awarded after satisfactory completion of one year's postgraduate study and practice of Child Health. Candidates work during the year as Paediatric Registrars under the direct supervision of a fully registered Paediatrician at an approval hospital to gain necessary clinical experience. They also attend a course of postgraduate study in Child Health conducted by the Hospital Paediatric Department that extends throughout the year and carry out a research project under supervision.

A candidate who satisfactorily completes the D.C.H. will have received sufficient further education and experience in Child Health to allow him or her to effectively support the general paediatric services for a province in Papua New Guinea as well as manage the usual paediatric problems. It is not intended as adequate training for a Specialist in Child Health.

The DCH is, however, a useful stepping-stone to more advanced paediatric training leading to recognition as a Specialist in Child Health. A candidate who obtains the DCH at a credit, or higher, level will be eligible to apply for exemption from one year of Part II of the MMed Degree Programme.

ENTRY REQUIREMENTS:

Fully registered Medical Practitioners in Papua New Guinea with at least 1 years work as a fully registered Medical Practitioner.

PROGRAMME:

- (i) Supervised work experience of a minimum of nine months in acute medical paediatrics, infectious diseases of children, surgical paediatrics, chronic diseases of children, rehabilitative paediatrics, neonatal paediatrics, nutrition, ambulatory paediatrics, community paediatrics and family planning.

- (ii) Formal teaching sessions throughout three trimesters on genetics, growth and development, nutrition, infectious diseases, epidemiology, neonatal paediatrics, surgical paediatrics, community and social paediatrics, maternal child health services and family planning. At least three formal teaching assistance sessions will be provided each week comprised of tutorials, seminars, case discussions, lectures, clinical presentations, clinical meetings, and unit audits and journal clubs.
- (iii) Self learning assignments by use of MCQ
- (iv) Write up of an investigation on a topic relevant to Child Health in Papua New Guinea. The topic is selected by the candidate in consultation with his/her supervisor and is carried out under supervision.

ASSESSMENT:

- (i) Continuous assessment of the supervised work experience is carried out. Candidates must obtain a satisfactory performance in all areas of their supervised work experience to be eligible to sit the final examination for the DCH. A grade for the candidate's performance during the year forms part of the overall marking. The candidate's involvement in teaching activities and support for junior staff is assessed.

A mid year assessment of the candidate's progress will be discussed with him or her, and will be forwarded to the SM&HS Postgraduate Committee.
- (ii) Write up of research project: Satisfactory completion of the candidate's project is required in order to be eligible to sit the final examination for the DCH. The project is marked.
- (iii) Final examination will consist of two written examinations, clinical examinations and an oral. Candidate must pass the written and the clinical sections and have at least a pass grade in the research project.

An external examiner will participate in the final examination.

MASTER OF MEDICINE IN CHILD HEALTH

MMED (CHILD HEALTH)

COURSE SUPERVISOR – Chairman of Child Health Discipline

CANDIDATES SUPERVISORS – Fully registered Paediatricians at approval hospitals.

INTRODUCTION: The Master of Medicine in Child Health is the Degree awarded by the University of Papua New Guinea to indicate that the candidate has satisfactorily completed the advanced training programme in Child Health. The possession of the MMed (Child Health) enables the candidate to be registered as a Specialist in Child Health by the Medical Board of Papua New Guinea, and to practice in this capacity.

The Master of Medicine Course is divided into two parts. In the first part of the course (MMed Part 1) emphasis is placed on upgrading the candidate's knowledge of the Basic Medical Sciences. In the second part of the Course (MMed Part 2) the emphasis is on clinical knowledge. In addition, candidates complete a supervised research project. Candidates work as registrars under the direct supervision of fully registered Paediatricians at approval Hospitals throughout the course, and satisfactory performance in clinical duties is an essential requisite for both parts.

The MMed Part 1 course is of one academic year's duration. The MMed Part 2 course is normally of four years duration. However, exemption from one year is usually given for candidates who have successfully obtained the Diploma of Child Health at a credit level or higher. Candidates are encouraged to spend one of the years in an approved overseas Paediatric Unit.

ENTRY REQUIREMENTS:

The Course is offered to fully registered Medical Practitioners who have successfully passed the Diploma in Child Health Course at a Credit (or higher) level.

PROGRAMME MMED PART 1:

Candidates who have obtained DCH at less than credit level may be allowed to enter the MMed Programme subject to having obtained further experience in Clinical Child Health practice, with recommendation from Supervisors and at the discretion of the Academic Staff and the Chief Paediatrician.

- (i) Supervised work experience of a minimum of 9 months in neonatal paediatrics, acute medical and surgical paediatrics, infectious diseases of children including tuberculosis and HIV infection, chronic diseases of children including paediatric malignant disease, rehabilitative paediatrics, nutrition, ambulatory paediatrics, community paediatrics and family planning.

- (ii) Directed learning throughout the year based on the two core components of the MMed Part 1 courses.
- a) Common Core Component. This component is common to all the clinical disciplines. The syllabus covers the Basic Medical Sciences – Anatomy, Physiology, Biochemistry, (including molecular genetics and cell biology) Pathology, and Pharmacology. This course component is coordinated through the Department of Clinical Sciences. Candidates are strongly encouraged to attend the two week revision course which is conducted in mid year at Port Moresby.
 - b) Child Health Core Component. This component is specific to Child Health. The Syllabus covers the Basic Medical Sciences as they are related specifically to the field of Child Health.
- Child Health Postgraduate tutorials at PMGH are held regularly on Thursday afternoons.
- (iii) Self-learning. Candidates will be expected to achieve most of the upgrading of knowledge on the Basic Medical Sciences through self learning aided by assignments

ASSESSMENT OF PART 1 COURSE:

- (i) Continuous assessment of clinical work during the course. A grade for the candidate's performance forms part of the overall assessment. This assessment includes an assessment of the candidate's involvement in teaching activities and support for junior staff.
- (ii) Written assignments throughout the year. Written examinations in both the Common Core and Child Health Core Components.
- (iii) Candidates must pass the Clinical Assessment, complete the written assignments satisfactorily and pass the written examinations in each of the two core components before proceeding to MMed Part 2.

PROGRAMME MMED PART 2:

- (i) Supervised work experience of a minimum of 3 years after completion of Diploma of Child Health and MMed Part 1. Work experience to include neonatal paediatrics, acute medical and surgical paediatrics, infectious diseases of children including tuberculosis HIV infection chronic disease, rehabilitative paediatrics, nutrition, ambulatory paediatrics, community paediatrics and family planning.
- (ii) Formal Teaching Sessions. These teaching sessions, organized by the Paediatric Departments of the Approved Hospitals will take the form of tutorials or seminars, case presentations, lectures, clinical meetings, unit audits and journal clubs. Topics for tutorials will include basic epidemiology and research project design, data management and statistical analysis. A minimum of three teaching sessions per week should be attended.
- (iii) Self-learning assignments – by use of MCQ self assessment and teaching around Clinical topics from the Postgraduate Child Health Syllabus.
- (iv) Write up of a research project on a topic relevant to Child Health in Papua New Guinea. The topics is selected by the candidate in consultation with his/her supervisor, and carried out under supervision.

ASSESSMENT:

- (i) Continuous assessments of supervised work experience

Candidates must obtain a satisfactory grading for all areas of their performance as registrars at the end of each year in order to progress and to be eligible to sit for the written and clinical examination at the end of the course. Grading for Clinical Performance forms part of the overall marking. Assessment of the candidates involvement in teaching and support of junior staff is included.

A mid year assessment of the candidate's progress will be discussed with him/her, and will be forwarded to the SM&HS Postgraduate Committee.

- (ii) Write up of research project. Satisfactory completion of the research project is required in order for the candidate to sit the written and clinical examinations. The project is presented at the Annual Meeting of the Postgraduate Society and the final written version must be submitted to the Professor of Child Health at least 2 weeks prior to the date of the Part 2 examinations.

The Project is assessed by the External Examiner and a grading of at least a pass level is required.

- (iii) Final Examination consisting of two written papers, clinical assessments and an oral.

An external examiner will participate in the final examinations.

Candidates must pass the written and the clinical components of the examinations, and obtain at least a pass for their research project.

NOTES FOR POSTGRADUATE SYLLABUS IN CHILD HEALTH – DCH AND MMed PART (2)

Whilst the Syllabus is the same for both the DCH and the MMed Part 2, the level of Knowledge expected is considerably higher in candidates sitting for the MMed Part 2. Whilst the DCH candidate will be expected to have a good working knowledge of the topics to enable him/her to deal with the common conditions seen in everyday Paediatric Practice, the MMed Part 2 candidate is expected to have an in depth knowledge across the whole syllabus. This knowledge, which will include up to date information of the Basic Sciences background to the various topics will enable him or her to deal not only with the common problems but also to recognize and form a rational management plan for the children presenting with the less common problems. It will also provide the basis on which the Specialist Paediatrician will run a Paediatric Service, which will include teaching at various levels.

It is expected that both as part of training, and for the benefit of his/her own knowledge base and Clinical skills, candidates will involve themselves in teaching undergraduate students and nurses.

GASTROINTESTINAL DISEASES

Diarrhoeal Disease – Acute
 -Dysentery
 -Persistent
 Oral Rehydration -Theory and Practice
 Helminthic Infections
 Malabsorption Syndromes
 Appendicitis
 Intussusception
 Hirshsprung's Disease
 Portal Hypertension and Oesophageal Varices

DISEASES AND DISORDERS OF THE RENAL/URINARY SYSTEM

Congenital abnormalities of the Urinary System
 Urinary Infection
 Haemolytic uraemic Syndrome
 Glomerulonephritis – Nephritic Syndrome
 -Nephrotic Syndrome
 -IgA nephropathy
 Acute Renal Failure and its Management
 Renal/Urinary stones

PAEDIATRIC ENDOCRINOLOGY AND METABOLIC DISEASE

Thyroid - Hypothyroidism
 -Hyperthyroidism
 Calcium Metabolism and its disorders
 Puberty – Normal
 -Precocious
 -Delayed
 Ambiguous Genitalia and abnormalities of Sexual Differentiation
 Cryptorchidism
 Adrenal Disorders in Childhood
 Diabetes
 The Commoner Inborn Errors of Metabolism
 Hypoglycaemia

SOCIAL PAEDIATRICS, DISORDERS OF THE FAMILY AND PAEDIATRIC PSYCHIATRY

Child Abuse

Behavioural Disorders - recurrent abdominal pain
 -cyclical vomiting
 -eneuresis
 -encopresis
 -others

Conversion Reaction -Hysteria

Anorexia nervosa

Autism Spectrum

Attention Deficit Disorder and Hyperactivity

PAEDIATRIC HAEMATOLOGY

Anaemia

Bleeding Disorders – Von Williebrand’s Disease
 -Idipathic thrombocytopenic Purpura
 -Henoch Schonlein Purpura
 -Others

Coagulation Disorders - Inherited – Factor 8 Deficiency
 -Factor 9 Deficiency
 -Factor 13 Deficiency
 -Acquired Disseminated Intravascular Coagulation

PAEDIATRIC MALIGNANT DISEASE

Leukaemia

Lymphoma - Hodgkins
 -Non Hodgkins – Burkitts
 -Other

Nephroblastoma

Neuroblastoma

Retinoblastoma

Tumours of the Liver

Tumours of the Central Nervous System

Germ Cell Tumours

Ewings Sarcoma

Rhabdomyosarcoma

Others

Palliation and Care of the Dying Child and the family

PAEDIATRIC IMMUNOLOGY

- Congenital disorders – Di George Syndrome
- Dysgammaglobulinaemia
 - Agammaglobulinaemia
 - Severe Combined Immunodeficiency
 - Wiskott Aldridge Syndrome
 - Ataxia Telangiectasia
 - Others
- Acquired HIV infection

AMBULATORY PAEDIATRICS

- Organisation of Paediatric Outpatient Services
Shock and its Management in Children
Management of Trauma in Children
Management of Burns
Paediatric Resuscitation
Management of common accidents – poison ingestion
- animal bites/stings
 - snake bite
 - near drowning
 - lime burns
 - others

EVIDENCE BASED MEDICINE, MEDICAL RESEARCH, BASIC EPIDEMIOLOGY AND MEDICAL STATISTICS

- INCLUDING - Research Study Type and Design
 -Basic Statistical Tests

ACCESS TO JOURNALS ONLINE

Many Journals can be assessed online through HINARI (Health International Access to Research Initiative).

You can obtain information on how to enter HINARI through the Medical Librarian who will provide you with a User ID and password.

ACCESS TO EDUCATIONAL MATERIAL ONLINE

The WHO website has a large selection of helpful material on a wide range of topics.

There are several other sites available and more will undoubtedly become available

NOTES FOR CANDIDATES IN MMED PART 1 CHILD HEALTH

COURSE STRUCTURE:

The course consists of two components. The first is the Common Core and is for candidates in all disciplines. The course is basically self learning. During the year guidance will be given in the form of “reading packages” distributed by the course coordinator. These will be an intensive revision block followed by a mock examination. The syllabus is comprehensive and basically an updating course in the Basic Medical Sciences. The Examination will cover the whole syllabus. Formal study time is one afternoon per week.

The second component of the MMed Part 1 course is the Specialty Core Course. This course is specific to each specialty. The syllabus for the Child Health Course is enclosed. Seminars on various topics will be held in Port Moresby on Monday or Thursdays. The seminar programme will provide a guideline for candidate and their supervisors studying for the course from outside of Port Moresby. Formal study time is one afternoon per week (Monday or Thursday in Port Moresby). In Child Health candidates are expected to complete 12 assignments throughout the year. These assignments which will be marked, are designed to help study, and will help in the preparation of seminars. They should be completed and handed in or sent to Professor Nakapi Tefuarani by the date shown on the assignment sheet. The assignment marks form part of the final Part 1 assessment.

The examination for the Child Health Core Course will cover the whole syllabus.

ASSESSMENT OF THE MMED PART 1 COURSE

1. CLINICAL COMPONENT

This is the candidate’s performance as a registrar throughout the year. It includes assessment of:

- Clinical diagnosis and management
- Reliability
- Punctuality
- Availability
- Supervision of Junior Staff
- Teaching of undergraduate students and nurses
- Work attitude and relationship with other staff

A satisfactory assessment is necessary. A candidate cannot pass the MMed Course without a satisfactory assessment of this Clinical Component.

2. COMMON CORE COMPONENT

This component will be examined by written examination at the end of the year. A pass in this component is necessary to pass the whole course.

3. CHILD HEALTH CORE COMPONENT

This component will be assessed by means of the assignments, and by a written examination at the end of the year. A pass in this component is necessary to pass the whole course.

IMPORTANT POINTS TO NOTE

The MMed Course is not a “walkover”. It is a tough course and passing it requires a considerable amount of hard work.

It is virtually impossible to pass the exam by starting to study in the second half of the year – there is simply far too much to get through.

A steady effort throughout the year will almost certainly result in success.

Allocate a certain number of hours of study per week of your free time – and stick to this. Six to eight hours a week – in addition to the study afternoons – would probably be a minimum required for most people.

Attend Clinical Meetings and Lectures – and take notes of the updates in Basic Medical Sciences that they provide.

Read around the clinical cases you have. Never prescribe a drug, or put up intravenous fluids without knowing what you are giving, and why you are giving it.

Use the Self Assessment questions in Physiology and Pharmacology provided. Work through the questions steadily.

The Assignments are to help you in your study. Make sure you get them completed and handed in, in time.

Make the best use of your time. (eg. Don't go to the bank on a pay Thursday or Friday if you can avoid it).

MASTER OF MEDICINE PART ONE

CHILD HEALTH COURSE COMPONENT SYLLABUS

GROWTH AND DEVELOPMENT

Intrauterine growth

Length

Weight

Brain and head circumference

Post natal growth

Weight

Height

Growth velocity

Effects of heredity and environment

Neurological development and factors affecting it

EMBRYOLOGY

 Cardio vascular system } in neonates and children
 Gastrointestinal system }
 Respiratory system

EVIDENCE BASED MEDICINE, MEDICAL RESEARCH, BASIC EPIDEMIOLOGY AND
STATISTICS

Including – Research Study Type and Design
-Basic Statistical Tests

MMED PART 1 CHILD HEALTH COMPONENTASSIGNMENTS

1. Discuss the current understanding of gene structure, organization and control. What is the genetic basis of Beta Thalassaemia. By February 23rd (JV)
2. What are cell membrane receptors? Discuss the biochemical and other pathways by which the cell responds to external stimuli. Give some examples of clinical conditions caused by a disturbance of normal receptor mechanisms. By March 9th (JV)
3. Discuss the normal physiology of the knee jerk reflex, and discuss the pathophysiology of cerebral palsy. By March 30th (NT)
4. a) Discuss the embryological development of the internal and external sexual structures, and the factors controlling this development.

b). Discuss the physiology of puberty and discuss the classification of disorders of puberty. By April 20th (WP).
5. Discuss the pathophysiology of asthma. Discuss the rationale for the current treatment of asthma in children. By May 11th (WP)
6. a) Discuss the physiology basis of signs and symptoms observed in an 18 months old with a large VSD admitted with heart failure. Discuss the drugs used in the management of heart failure.

b) Provide a diagram indicating the actions of drugs used in hypertension. By June 1st (NT)
7. Discuss the adjustments which occur in the Kidney:
 - a) During dehydration caused diarrhea
 - b) After eating a very salty meal
 Discuss the role of the kidney in
 - a) control of blood pressure
 - b) acid base haemostasis
 By June 22nd (NT)
8. Discuss the pathophysiology of respiratory failure

Give a brief classification of different types of hypoxia. Discuss the oxygen haemoglobin desaturation curve. Discuss the pulse oximeter and the use of pulse oximetry in clinical conditions such as pneumonia. By July 12th (JV)
9. Discuss the intestinal absorption of carbohydrate, fat, protein, sodium, water, and iron. Briefly outline the rationale of Oral Dehydration Therapy. By August 2nd (WP)

10. What are the components of the immune system? Discuss the processes which take place after a vaccine is given to a child, in the production of an immune response.

What is the graft versus host disease?

Give a classification of the immunological disorders of childhood? By August 3rd (WP)

11. What do you understand by the term oncogene. Discuss the role of oncogenes and tumour suppressor genes in Paediatric cancer. By Sept 13th (JV)
12. Give a reasoned account of your approach to the diagnosis and management of a child with bleeding disorder. By October 24th (NT)

NOTES:

These assignments are part of the Part 1 course – and they will be marked. You must complete them and make every effort to hand them in by the dates given. They should help you with preparing for the Seminars.

The assignments should be in your own words. Copying large chunks of textbooks:

- Is an extremely inefficient way of learning
- If not adequately acknowledged is plagiarism

You will get much more out of the mid year revision course if you have done the first 7-8 assignments than if you have not.

Assignments not received within 4 weeks of the due date may not be marked – and this will adversely affect your course result.

POSTGRADUATE TRAINING OUTLINE – CHILD HEALTH, PMGH1. FORMALMonday

1300 - 1500

DCH/MMED COMMUNITY AND CLINICAL CHILD HEALTH TUTORIALS

Tuesday

1100 - 1200hrs UNIT CLINICAL CASE PRESENTATION

1600 - 1700hrs HOSPITAL/SCHOOL GRAND ROUND

Wednesday1200 - 1300hrs PROGRESS ON RESEARCH TOPICS
(1ST WEDNESDAY OF MONTH)Thursday

1300 - 1500hrs BASIC MEDICAL SCIENCE IN CHILD HEALTH TUTORIALS

Friday

1200 - 1300hrs JOURNAL CLUB

1400 - 1600hrs SHORT/LONG CASES (AS ARRANGED)

NOTES

1. GENERAL:

You need to organize your clinical commitments to enable you to attend the teaching sessions. However, clinical emergencies always take priority. All registrars will be expected to help with clinical teaching for medical students.

You are expected to attend and participate in Journal Club presentations. We suggest you bring lunch.

There is a very tight schedule of clinical work and teaching. The schedule is equally – if not more – tight for those leading the sessions. **PLEASE BE PUNCTUAL.**

Attendance at the Tuesday clinical meetings – both morning Paediatric and afternoon Hospital/Faculty should be a regular part of the week's routine. Throughout the year a large amount of ground is covered – and the meetings provide a very good update on various topics.

2. INFORMAL

Learn from your patients. Read around the clinical problems that they present. Make absolutely sure that before you give any drugs, you know what it does and what problems it is associated with, and that when you give intravenous fluids you understand why you are giving that particular fluid, and what the child's requirements are. Make absolutely sure you fully understand the standard treatment regimes.

3. TEACHING OF UNDERGRADUATES

Registrars are expected to teach undergraduate and nursing students and residents. This is part of the training programme. It gives the candidates an opportunity to critically assess their own history taking and clinical examinations skills. It also gives them experience in teaching – a skill they will require at Specialist level.
